REMARKS

50X1-HUM

During the period from 22 July to 25 August 1951, the barracks buildings of Perleberg airfield were occupied by about 100 recruits wearing red epaulets who had been stationed there since April 1951. In the spring of 1951, a strip about 400 meters wide in the middle of the landing field was plowed, levelled and seeded. This strip was serviceable for landing aircraft. However, no aircraft were seen at the field. The former repair hangar was dismantled and the former underground fuel depot near the hangars destroyed. Trucks and sedans were housed in the garage. A weather station was observed in the tower of the flight control building. The old AIA tower was unoccupied. About 20 fuel drums were stored in a temporary fuel dump. No in-coming fuel shipments were observed. No radio installation was available at the field which was not fenced in but guarded. Security measures were particularly strict in the wooded area south of the field. \*

\* Comment. As previously observed, no air unit is stationed at the airfield. The barracks installation quarters an army unit.
